RUTEC® PUR-Granulate R5000

PRODUCT DESCRIPTION

The RUTEC R5000 granulate made of extremely wearresistant elastomer is an optimal alternative to conventional sand as shot-peeling medium. It is characterized by exceptionally good physical properties. The polygonal structure of the individual granulate granules ensures that bullets can settle in cavities, which considerably reduces the formation of bullet esters. RUTEC R5000 can be installed both on a full surface area and in the form of a top layer on an existing sand bullet trap.

We also recommend the installation of a substructure made of plastic that is suitable for use with the gun, in order to prevent the granules from slipping off. Moreover, by introducing the plastic construction, the main target areas can be cleaned separately. A cover sheet made of our RUTEC natural rubber keeps the granules in position and prevents the entry of foreign substances in the projectile.

BENEFITS

- Recording of high-energy projectiles (approval up to 17,000 joules)
- Suitable for low-emission and pollutant-containing ammunition
- Very long service life
- Low bulk density (approx. 730Kg / m³)
- High reusability of the bombarded granulate
- Better compliance with occupational safety and environmental protection
- Low maintenance
 - No dust formation
 - No watering required
 - No loosening required

BEMERKUNG

Alle Angaben basieren auf Laborergebnissen und entsprechen unserem aktuellen Wissensstand. Die o.g. Angaben dienen der Information zu unseren Produkten und deren Verwendung. Dieses Dokument ist keine Garantie für eine besondere Eigenschaft oder Leistung eines Produkts oder seiner Eignung zu einer speziellen Anwendung. Wir weisen darauf hin, dass die genannten Daten sich im Zuge von Weiterentwicklungen ändern können, daher behalten wir uns entsprechende Anpassungen vor.
